The HPDMnet research testbed has multiple international sites within the GLIF (Global Lambda Integrated Facility) infrastructure in the Americas, Europe and Asia. The network is dynamically provisioned by different control softwares.

HPDMnet International Experimental Research Testbed

The HPDMnet research testbed has multiple international sites within the GLIF (Global Lambda Integrated Facility) infrastructure in the Americas, Europe and Asia. The network is dynamically provisioned by different control softwares.

Key Concept and Design Considerations
- Virtualization
- Close Integration of Services and Support Capabilities
- Infrastructure as a Service (IaaS)
- Programmable Networks
- Multi-Layer Services
- Multi-Domain Service Provisioning
- Experimental Testbed Investigations
